Having Problems with Spoilage? Shrinkage?

Grain Management is Made Simple & AFFORDABLE
with STEPS Grain Management System's Smart Switch and Bin Monitor

Ensure the best return-on-investment for your grain.

Control your grain bins from the beach!

STEPS Smart Switch

Turn ANYTHING On or Off from ANYWHERE

- The Smart Switch will automatically turn on/off the fans according to your settings; or you can manually turn the fans on/off ANYTIME and ANYWHERE

- In real time, you can read the current temperature/humidity at your bin site, change your settings, or simply monitor the current conditions

- Used for natural air drying and to maintain market value while storing
- Other applications include livestock barn fans, pivots and hay storage

STEPS Bin Monitor

Help Identify Potential Problems Before They Arise

- Know the temperature of your grain at the bottom of bin and the temperature and relative humidity in the headspace (your exhaust air)
- Includes a cable and one temperature sensor. Additional sensors are available.

Both products are very cost-effective. Compare with Bullseye.

-NOTE: Both products require a smart phone and internet at the location; the app is included free with purchase; and there are no additional subscription fees.
