Planter Solutions

PPS Flange Bushing Parallel Arms Rebuild Kits

Eliminate ALL Areas of Unwanted Movement in the Parallel Arms!

Precision Planter Solutions, or PPS, designed their patented bushings to be the best option to fix parallel arms in planters. Here's ten reasons why they are indeed the best option:

#10

YEARS of PROVEN results. It is PROVEN that PPS bushings are the only option to stop all play in your row units.

#9

Designed by farmers for farmers. Ron Jackson, and his son Cody, farm near New Boston, Missouri.

#8

If you're looking for new arms, PPS arms are laser cut, robotically welded, and built in Missouri. These arms have the bushings already pressed into them and are ready to bolt on. They are purposely built heavy to withstand high speeds and hydraulic down pressure.

#7

PPS arms will be the last arms that you have to buy. PPS arms and bushings are made to withstand hydraulic down pressure and high speed. PPS bushings are tighter, after 30,000 acres, than new John Deere bushings.

#6

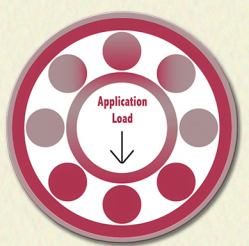

The PPS outside flange bushing provides you 35% more wear area than a bushing that's only 1/2 inch wide. There is more contact area in just one PPS bushing than with 8 bearings.

The flange also protects the arm from side forces.

#5

Parallel arms are not the right application for a small ball bearing. There are three less-than-one-quarter-inch balls trying to handle all this pressure. The limited rotation of parallel arms means those three little balls are eventually going to be carrying all that load without any grease. You also just can't check the bearings and make sure they're going to make it through the planting season. A bearing will fail and then need to be replaced immediately, most likely at a time you should be planting.

#4

PPS inner bushings have internal threads, so there is no slop like other bushings.

#3

You no longer have to worry about breaking parallel arms. PPS offers arms for every major brand. PPS arms will be the last that you have to buy.

#2

Do you really want 192 more bearings to check on a 24-row planter?

#1

PPS' and S.I. Distributing's goal is 100% satisfaction. You won't find a more dedicated team to help you get the answers you need when you need them.
